FaceStim[®]

What is FaceStim®?

FACESTIM® is one of the unique features of JOVENA®. It's an intense facial workout helping to tight, volumise and tone the skin and muscles.

How does FaceStim work?

FACESTIM uses bipolar radiofrequency and muscle contractions based on diathermocontraction. This combines diathermy (deep thermal heating) and deep muscle contraction that can reach the deeper layers of the muscles without causing any side effects. Radiofrequency generates heat in the tissue, resulting in collagen denaturation. This helps produce new collagen formation that can help with tissue remodeling and shrinking of the lax connective tissue.

Why use FaceStim?

It's the first individualised solution for treatment of the skin and the tonification of the face muscles in only 20 minutes, with minimal downtime.

Who is the right candidate for FaceStim?

Everyone can benefit from having less wrinkles and more lift. Ask if the FACESTIM procedure is suitable for you, please see the contraindications above.

What areas can be treated with FaceStim?

It targets the Frontalis, Zygomaticus, Risorius, Orbicularis Oris, Masseter & Platysma, the Facial Muscles (to give a nice face lift and corrects the facial asymmetry). It also works on the collagen remodeling and deep dermal layers of skin for perfect glowing and healthy skin.

How is the FaceStim procedure performed?

The procedure is a simple and easy treatment that can start immediately after facial cleansing. You will lay down during the treatments for 30 minutes.

During the treatment you will feel a mild heating sensation and comfortable muscle contractions. Once the procedure is completed you can go back to your daily routine.

Has it got any downtime periods?

FaceStim is a non invasive procedure which doesn't require any periods of downtime or recovery.

Can I have the treatment all year round?

The answer is yes.

How long does it take to notice the results?

You begin to feel 10% of the results after the treatment. Optimal results are usually reported after 45 days from the procedure and continue to improve for several weeks with results lasting between 6 to 8 months.

Can I undergo the FaceStim treatment together with injections?

FaceStim can be used together with these other treatments.

Remember, **If you have had any injections you will have to wait 2 weeks** before having FaceStim treatment.

If you are starting the rejuvenation program, we advise to start with FaceStim and then have botox injections.

Speak to your clinician to personalise the course of treatment which is right for you.
